TREDDY

INVESTMENT
PROPOSAL

TREDDY MAKES IT POSSIBLE TO EARN MONEY BY PROVIDING LIQUIDITY TO THE CRYPTOCURRENCY MARKET

Mission

To provide liquidity to the cryptocurrency market

Technology

An Ubuntu server in the Amazon Cloud works with the Binance exchange in real time. The robot is written in C and Ruby, uses Redis For data storage

Product

By providing liquidity, we allow traders to trade at better prices

WITH TREDDY TECHNOLOGY, YOUR MONEY WORKS FOR YOU

WITH THE AUTOMATION OF TRADING ON THE PLATFORM, THE PROFITABILITY REACHES >30% PER YEAR

12 months of investments are used as an example

BTC yield was **36.18%** or **0.36 BTC**

The yield in USD was **24.26%** or **24.268 USD**

TREDDY BRINGS ROBOTIC TRADING TO A NEW LEVEL

Great **emphasis on security** - a multi-level system for protecting funds on the exchange, careful work with server security, constant audit of bottlenecks in the system

TR

In certain market conditions, **the robot can receive super profitability** – in the most profitable month of 2020, the profitability was 10.6%

Conservative, but at the same time highly profitable strategy – we do not pursue risky operations, we try to get a good predicted profit every month

Transparent statistics – access to the telegram bot, which shows

There has **not been a single loss-making** month since the launch of the current robot (October 2019)

Monthly reports detailing our work and market vision

statistics for any period

WE ANALYZE RISKS AND MITIGATE THEM AT THE EXPENSE OF OUR STRENGTHS

Hacker attacks on Binance

Binance has a fund to which it deducts a percent of its profits every month that compensate losses in case of an attack.

The maximum possible damage – zero profitability of the robot

Hacker attacks on accounts «Treddy» to withdraw money

Treddy has several secure devices that generate keys disconnected from the Internet and wireless networks.

Their absence makes the withdrawal of funds impossible.

Abnormal market behavior due to trading, where robots trade at a loss

The maximum loss for a floating day in this case is 0.5%, after which trading stops. The loss is offset by previous positive days

Other risks

Treddy has its own fund to which it allocates part of the monthly profit, and from this fund **Treddy compensates for losses**

WE HAVE DEVELOPED A STEP BY STEP STRATEGY OF FUTURE DEVELOPMENT

Improvement of trading algorithms

2

Increasing the budget and optimizing trade for the budget

3

Connecting new cryptocurrencies

7

Reduced costs

6

Using new financial instruments for trading (futures and options)

5

Testing and launching new strategies

4

Minimizing trading commissions

WE OPTIMIZE COSTS TO DRIVE CONSISTENT PROFITS

Expenses: -

Servers

Support for low trading fees

Use of financial instruments

Other expenses (office, employees, etc.)

Earnings:

The percentage of profit is floating and depends on such factors as the volume of trading in the market and market behavior. Also Treddy employees are constantly improving the robot in order to increase profitability.

GROW WITH US

Requested investments:

\$500K-\$5M

Investment amount in the first month

> \$100K

Investment amount in the following months. The maximum amount remains at the discretion of the investor by prior agreement

Withdrawal of investments:

Terms of withdrawal are discussed individually

Deposit and withdrawal of funds, as well as calculation and accrual of profit, occurs on the first day of the month

WE WILL BE HAPPY TO TELL YOU MORE ABOUT THE PROJECT
